Summary

Final-year CS student at FAST-NUCES with hands-on ML/AI internship experience building Whisper ASR pipelines and LLM-powered automation. Shipped production-integrated features across speech recognition, computer vision, and NLP summarization. Seeking an entry-level AI or software engineering role where I can build intelligent systems that actually get used.

Education

FAST-NUCES

Sep 2022 - Jun 2026

B.S. Computer Science

Islamabad, Pakistan

Relevant Coursework: Deep Learning, Generative AI, Data Structures & Algorithms, Operating Systems, Databases, Software Engineering

Technical Skills

Languages Python, C/C++, Java, JavaScript, Kotlin, SQL

AI / ML PyTorch, TensorFlow, Whisper ASR, Hugging Face Transformers, OpenCV, scikit-learn

LLM & NLP Prompt engineering, LLM integration, summarization pipelines, RAG workflows

Web / Mobile Node.js, Express, React, MongoDB, REST APIs, Android (Kotlin), Flutter

DevOps & Tools Git, Docker, Linux, CI/CD, n8n workflow automation, AI-assisted development

Experience

ML / AI Intern

Jun 2025 - Aug 2025

Genesys Research Lab

Islamabad, Pakistan

- Built end-to-end Whisper ASR pipelines for real-time transcription, speaker segmentation, and audio preprocessing within a meeting intelligence platform
- Developed LLM-powered summarization modules with structured prompt engineering to automatically extract action items, decisions, and meeting summaries
- Developed computer vision features using OpenCV for video frame extraction; automated model evaluation and preprocessing workflows using Python, reducing manual pipeline overhead

Projects

Automated Scrum Master - Final Year Project

Aug 2025 - May 2026

Python • n8n • LLM APIs • REST APIs

- Architected an AI-driven Agile system automating sprint planning, backlog scoring, and meeting facilitation via LLM-based workflows, saving 2+ hours of manual project management per sprint
- Implemented backlog prioritization heuristics and sprint division logic with n8n pipelines; achieved 70–80% accuracy in automated user story generation validated against curated backlog entries

Hotel Booking Platform

2023

Node.js • React • MongoDB • Express • JWT

- Designed a full-stack booking platform with role-based access control, JWT authentication, and RESTful API architecture across distinct user and admin flows
- Implemented end-to-end CRUD operations with persistent session management and a responsive React frontend consuming a structured Express/MongoDB backend

Autonomous Racing Agent

2024

Python • TensorFlow • Deep Reinforcement Learning • TORCS

- Trained a DQN-based autonomous driving agent with custom reward shaping in the TORCS simulation environment; implemented full training loop, replay buffer, and quantitative evaluation metrics

Dietary Management Android App

2025

Kotlin • MVVM • Android • REST APIs

- Built a production-structured Android app with MVVM architecture, offline data persistence, background services, and a versioned REST API layer for cloud sync
